

Monitor Usage & Compliance. Make Better Decisions.

In today's hospital environment, data is key. With CleanSlate's built-in cloud connectivity, you can monitor device usage or log each time a hospital-owned device is sanitized.

CleanSlate UV's remote monitoring platform provides real time bulb status, usage trends and more. The RFID compliance platform allows for each hospital-owned device to be tagged, tracked and recorded. Available via a secure web dashboard, this gives facilities a real-time view of device hygiene.

View usage trends in real time

to optimize CleanSlate placement and guide protocol improvements.

Bulb and maintenance info

to minimize any downtime and allow remote technical support.

Tag facility-owned devices

including smartphones, tablets, voceras, spectralink phones, etc.

Log each time a device is sanitized

and use this data for internal or external audits and staff training.

Facilities have the option of basic remote monitoring or the full RFID compliance dashboard.

Technical Information

- High Frequency (HF) RFID tags
- WLAN connection (a/b/g/n)
- FCC/IC approved wifi module
- Web-based dashboard
- Electronics upgrade may be required
- Internally hosted options available
